

Assembly Instructions for your little chair:

1. First separate the two types of legs from the two back poles. (Please note that the front legs are a bit smaller than the back legs and have shorter screws. The two back poles have the notches cut out in them for the backrest and have no screws.)
2. Attach the front legs to the front of the chair. You will know it is the front of the chair because it has two blocks on the underside of the chair where you need to screw in the legs.
3. Adjust each of the two back poles so that the notches are facing each other. Insert the back rest.
4. You will need to attach the back poles and the back legs simultaneously as the back legs screw directly into the back poles.
